

# YAXIM

Yet Another XMPP Instant Messenger  
(Jabber on Android)

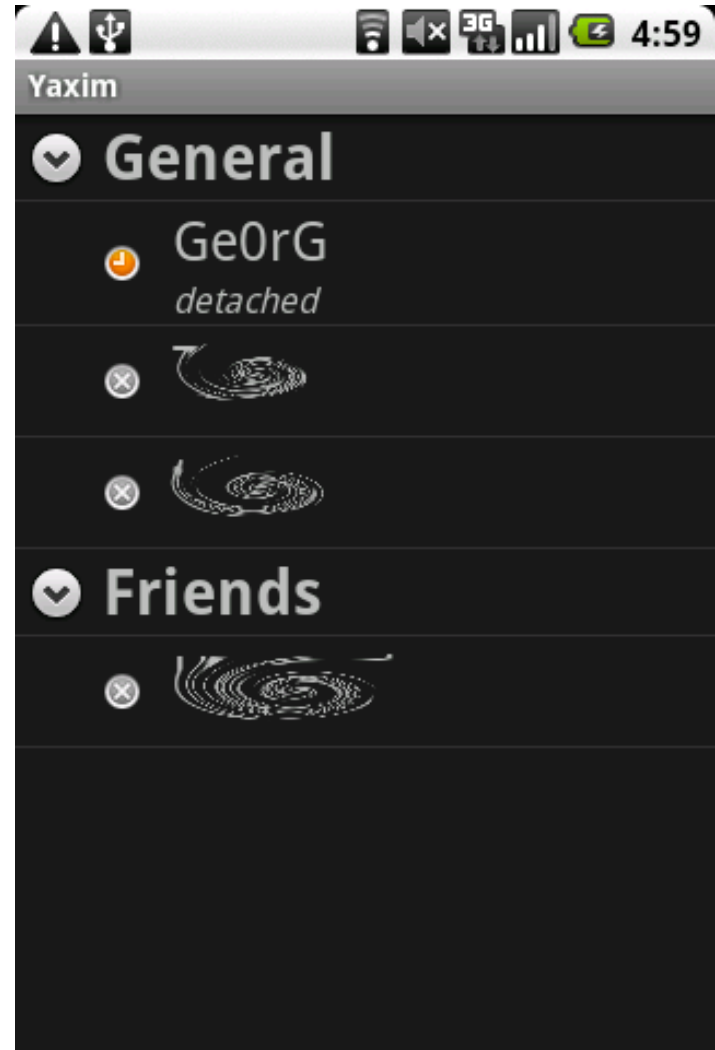

Georg Lukas <georg@op-co.de>

# *Why yet another IM client?*

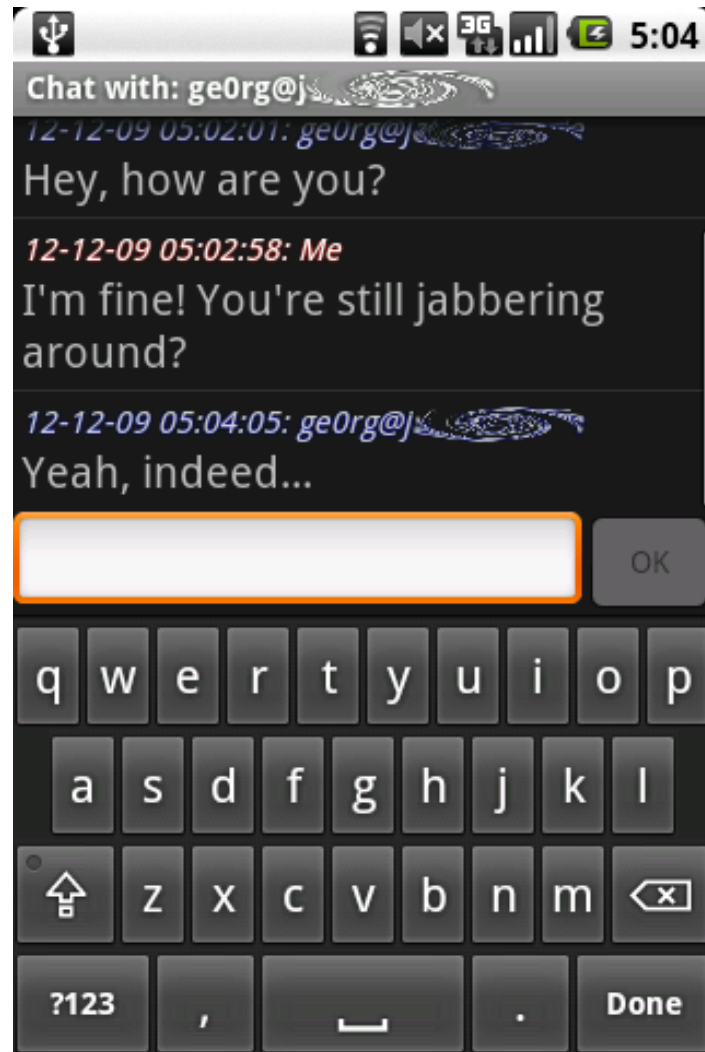

- Private conversations on Google's servers?
- No Open Source client yet
- All other clients suck (lose connection)

# State of Affairs

- Basic Jabbering (thanks SMACK!)
- Keeping connection almost always ;-)
- 180KB Android Package (APK)

# Screenshots are great!

# What is still missing?

- usability, Usability, *Usability!*
- Database backend (in the works)
  - Store whole conversation history!
  - Write messages while offline, sync up!
  - Multi-account support
- Multi User Chat (MUC)
- More developers, testers!

# Come and help us!
